FSIS NOTICE

23-26

5/28/26

EXPORT MODULE OF THE PUBLIC HEALTH INFORMATION SYSTEM – ARGENTINA AND CHILE

I. PURPOSE

A. This notice informs FSIS inspection program personnel (IPP) that Argentina and Chile will be included in the next Public Health Information System (PHIS) export module rollout on June 1, 2026. Starting on that date, all export certificates for FSIS meat and poultry products exported to Argentina and Chile will be generated, issued, and officially maintained in FSIS' PHIS. This change excludes certificates for casings and egg products.

B. This notice provides instructions to IPP for reviewing country-required statements generated by the PHIS statements module for Argentina and Chile that will be added to PHIS on June 1, 2026.

C. This notice also instructs IPP to apply a digital signature for exports to Argentina and Chile and provides the same instructions issued previously in other PHIS export module phases for ordering the seven-digit export stamps. These instructions supplement the instructions in [FSIS Directive 13000.5](#), *Public Health Information System Export Certification*, and [FSIS Directive 9000.1](#), *Export Certification*.

II. BACKGROUND

A. The complete list of all countries active in the PHIS export module is available in the export section of the [PHIS Components](#) page of the FSIS website.

B. On July 9, 2021, FSIS implemented an enhanced digital signature for IPP when approving export applications and issuing export certificates for countries that accept a digital signature. These instructions replace the instructions in [FSIS Directive 13000.5](#) to apply a digital signature with a LincPass. After IPP review and approve the certificate package, PHIS will automatically apply the enhanced digital signature to all pages and upload a PDF of the signed export documents into the export task.

C. The [FSIS Export Library](#) listing for Argentina and Chile will be updated to reflect the transition from using letterhead certificates to using country-required statements via the PHIS statements module. The PHIS statements module will replace the current use of letterhead certificates for meat and poultry exports to these countries that are processed in PHIS. Export applicants will no longer complete or attach any letterhead certificate for export applications for Argentina and Chile on or after June 1, 2026. The PHIS statements module will also be used to generate other statements that are not part of a letterhead certificate but are required as indicated in the [FSIS Export Library](#) listings for Argentina and Chile. All attestations and information as described in the [FSIS Export Library](#) listings for Argentina and Chile will be captured in the Remarks section of the FSIS Form 9060-5 or on the FSIS Form 9060-5B (continuation sheet). These statements cannot be edited or altered except when required to enter data, such as an ineligible U.S. state, cooking time, cooking temperature, or other information that may vary depending on

the importing country's requirements for a particular product. The statements used in the PHIS statements module are the exact statements as required in the [FSIS Export Library](#) for the importing country. Links to any existing letterhead certificates will remain in the [FSIS Export Library](#) for Argentina and Chile until the country is added to PHIS on June 1, 2026, after which the links will no longer be available and will reflect that the required statements to be used by the export applicant occur via the PHIS statements module.

III. AWARENESS MEETING WITH ESTABLISHMENT MANAGEMENT

Immediately upon receipt of this notice, the inspector-in-charge (IIC) at facilities that export to Argentina and Chile is to have a meeting with establishment management to make them aware of the contents of this notice. The IIC is to document this meeting in PHIS. During the meeting, the IIC is to inform establishment management that beginning June 1, 2026:

1. All meat and poultry export applications for Argentina and Chile will be processed in PHIS;
2. Export certificates for meat and poultry exports designated for Argentina and Chile will be requested, approved, generated, issued, and officially maintained in the PHIS export module;
3. FSIS will no longer sign and issue letterhead certificates for exports to Argentina and Chile. Instead, all required statements will be included in PHIS as part of the statement's module. The statements will be selected by the export applicant when completing the export application in PHIS. PHIS will print the selected statements as part of the export certificate in the Remarks of FSIS Form 9060-5 or on FSIS Form 9060-5B;
4. All meat and poultry export certificates generated through PHIS for Argentina and Chile will be digitally signed by IPP in PHIS;
5. The export certificate will be printed on plain paper by industry personnel with a PHIS export access role and include the PHIS-generated watermark when printed. FSIS IPP will not print any 9060-5 series certificates unless the establishment has no PHIS access or printer, as printing the certificates is an industry function;
6. Export applicants with pending certifications for Argentina and Chile that have not been completed and signed by FSIS on paper before June 1, 2026, will need to submit a new original (not replacement) application in PHIS on or after June 1, 2026, in order to receive a digitally signed export certificate;
7. If not already known, IPP will need the name of the establishment individual who serves as the Establishment Administrator, in addition to a current e-mail address. IPP are to enter the Establishment Administrator into the Contacts page of the Establishment Profile as outlined in [FSIS Directive 13000.6](#), *Actions to Facilitate Industry Access to The Public Health Information System*; and
8. The [PHIS Components](#) page of the FSIS website provides additional information for exporters on gaining access to PHIS, as well as additional information regarding the PHIS export module.

IV. ENHANCED DIGITAL SIGNATURE

A. FSIS implemented an enhanced digital signature on July 9, 2021, for all countries active in the PHIS export module that accept a digital signature. With the enhanced digital signature, IPP are not to manually apply a digital signature or manually upload any signed export documents for countries that accept a digital signature.

B. IPP are to review [PHIS help Export Tutorials](#) for click-by-click steps to approve export certificates in PHIS and applying a digital signature. IPP are to review the documentation for accuracy and ensure the documents do not contain obvious typographical errors before approving. IPP are to inform the applicant when they observe obvious typographical errors and withhold a final decision until these errors are corrected.

C. For exports to Argentina and Chile, a Public Health Veterinarian is the FSIS certifying official who is to ensure the PHIS export task is completed. An official digitally signed export certificate with the required watermark “Approved Certificate – Available for Validation in PHIS” will not be available in PHIS if this step is not completed.

D. The official copy of the approved and digitally signed export certificate is digitally stored in PHIS and available for verification by foreign government officials via the Certificate Signature View (CSV) role in PHIS. IPP do not need to print a copy of the certificate for recordkeeping purposes.

V. IPP INSTRUCTIONS FOR THE PHIS STATEMENTS MODULE

A. Beginning on June 1, 2026, Letterhead Certificates or supplemental forms for Argentina and Chile are not to be signed by IPP or issued with the certificate package.

B. IPP are to review the documentation before applying the digital signature to verify that the export applicant has selected the appropriate statements based on the products listed on the export application and the guidance provided in the [FSIS Export Library](#) for the importing country.

EXAMPLE: An export shipment includes poultry and beef, and there are poultry and beef statements that are required in the [FSIS Export Library](#). The export applicant has selected the statements for poultry and the statements for beef. IPP verify that both are present before applying the digital signature or completing the export task.

C. IPP are to be aware that export applicants can unlock the export application and edit which statements they select or deselect at any point before the application’s final approval by the FSIS certifying official. If IPP observe missing country-required statements or incorrect statements that have been added by the export applicant, IPP are not to immediately reject the application. An export applicant cannot correct errors after an application is rejected. Instead, IPP are to inform the export applicant that they need to correct the required statements and re-submit the export application after correction. After correction and re-submission of the export application by the export applicant, IPP are to continue their application review and approval process in PHIS, including verification of any statements selected by the exporter applicant to ensure alignment with requirements in the FSIS Export Library.

VI. SEVEN DIGIT EXPORT STAMP

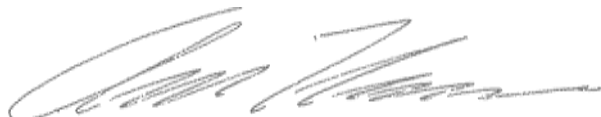

A. IPP are to be aware that for all exports processed through PHIS, the system will automatically generate a seven-digit (numbers only) export certificate number upon creation of the export application by the export applicant. This seven-digit export certificate number will be used as the USDA export stamp number to mark the products for export. Upon receipt of this notice, IPP certifying exports to Argentina and Chile are to order a seven-digit export stamp if they do not already have one. This is an accountable item and IPP are to securely handle this export stamp in the same fashion as the six-digit export stamp.

B. IPP are to order the accountable seven-digit export stamp (item number FSIS-03-7) from the Government Publishing Office (GPO), [GPO Specialty Supplies Website](#).

VII. QUESTIONS

Refer questions regarding this directive to your supervisor, or to the Office of Policy and Program Development through [askFSIS](#) or by telephone at 1-800-233-3935. When submitting a question, complete the [Ask A Policy Question](#) form and select Export for the Topic type.

NOTE: Refer to [FSIS Directive 5620.1](#), *Using askFSIS*, for additional information on submitting questions.
